

## Measuring for Roller Blinds

### Measuring Tips:

Use a metal tape measure for best accuracy.

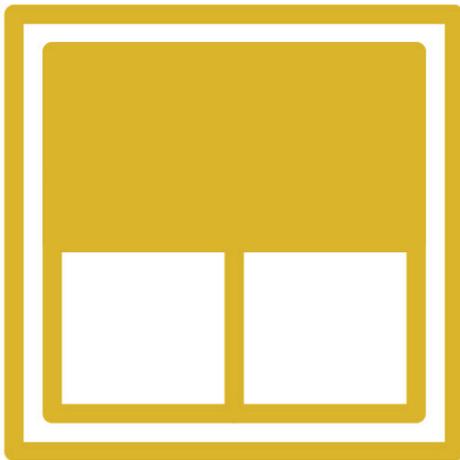

Measurements should be taken in cm, to the nearest 0.5cm.

Always double check your measurements for accuracy.

### 1 Choose Where to Hang Your Blind

Depending on where you're going to position your blind, you'll need to measure slightly differently. Our team are always happy to advise on the best position for your space and home, so please feel free to get in touch with any questions.

Inside Recess

Outside Recess

### 2 Choose Your Functionality

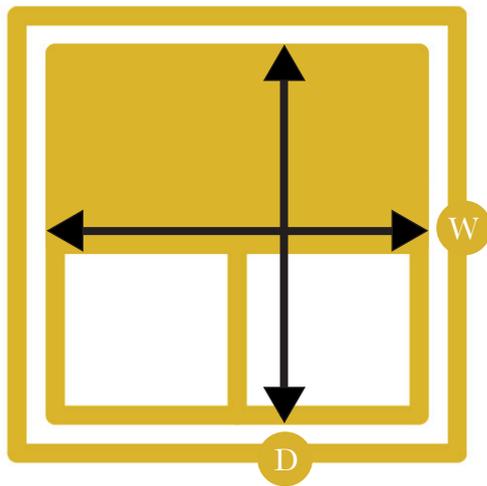

Tidmarsh are the blinds experts, and we have a wide range of blinds and systems to offer. Let us know if you're looking for a modern, motorised roller blind or a traditional chain operated blind, or give us a call and chat through the options available to you. Information about all of our products can be found on our website, [tidmarsh.co.uk](https://www.tidmarsh.co.uk).

### 3 Time to Measure

Use our helpful guides to measure your blind width and drop, then write them down in the space below.

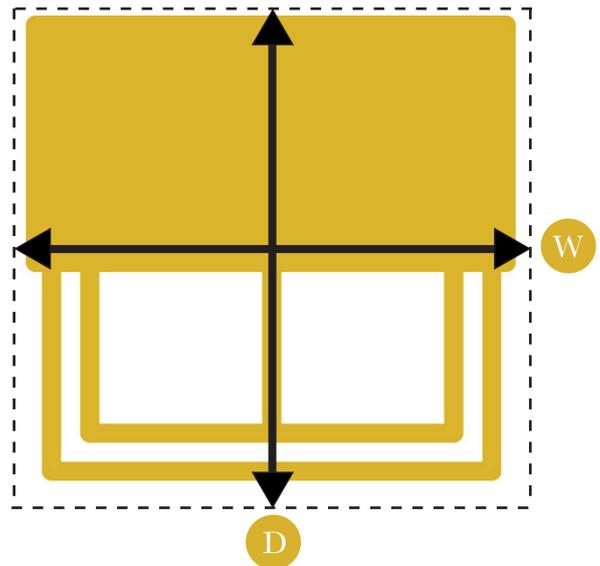

Depending on the system you've chosen, the recess may need to be a minimum depth to accommodate the brackets. We will give you any information you may need about this.

Inside Recess

Make sure to measure the width of the recess at the narrowest point. This will ensure that your blind can move up and down freely without hindrance.

Outside Recess

We recommend that you factor in at least 8cm of overlap outside your recess, particularly if you have a blackout blind and are concerned about light leakage.

	Window Name	Width	Drop
